WHO WE ARE

Cross is an ISO 17025 accredited precision measurement company with over 80 years of experience in the precision measurement industry.

Our guiding values have always been **character, integrity & professionalism.**

We strive to be our customers' trusted measurement partner by providing accuracy, reliability and efficiency to let them focus on what they do best.

SERVICES

We offer an industry-leading scope of services including:

- On-site or in-lab A2LA accredited calibration & repair of over 150 measurement parameters including:
 - **Mass & weight**
 - **Force**
 - **Electronics**
 - **Dimensional**
 - **Pressure**
 - **Temperature/humidity**
 - **Torque**
- **Quality Assurance & Quality Control** auditing of your production process and product capability
- **Embedded services**
 - Technicians can perform any or all of your services on a full-time, fully integrated basis at your facility
- **Parts receiving & inspection**
 - Full line of contract inspection services with optimum turnaround time
 - On-site receiving, inspection, and quality sorting of incoming parts

GAGESUITE™

Calibration Management System

We offer the most comprehensive, user-friendly calibration management system on the market. GageSuite provides you with complete asset management, including the ability to download and print certificates of calibration for your equipment.

PRODUCTS

Partnerships with over 50 major measurement equipment manufacturers provide the best solution for your application.

- **Scales & scale systems** – bench, counting, floor, analytical & checkweighing
- **Heavy capacity scales** – truck, rail, & axle
- **Load cells & transducers**
- **Force gages & torque** measurement equipment
- **Dimensional metrology** – hard gages & hand tools
- **Multi-sensor inspection systems** – comparators, vision systems, CMMs, probes and fixturing

TESTING

The team at our ISO 17025 accredited testing facility has over 80 years of combined experience in product testing. We have extensive capabilities in both destructive and non-destructive testing including:

- Environmental Testing
- Airbag Deployment Testing
- Materials Testing
- Product Testing

CUSTOM ENGINEERING

Our engineers can design a simple, easy to use solution for your complex measurement application.

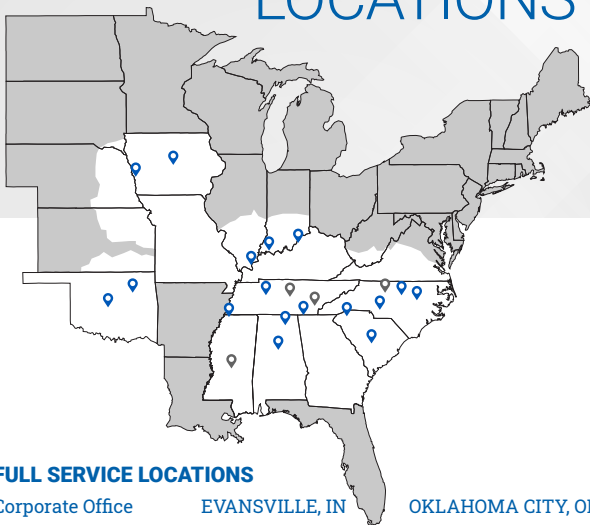

- In-process instrumentation
- SPC & data collection
- Automation & systems integration
- Design & build gaging
- Software programming
- Mechanical & electrical system design
- Full-service integration: installation & training

Our team is devoted to problem solving and can make it easier than ever to:

- Improve production efficiency
- Raise the level of quality
- Reduce raw material consumption
- Obtain more accurate, reliable measurements in less time
- Collect data for traceability
