Preface

This book is intended to help easily locate component information for Yaskawa GA500 Drives and optional accessories.

The intended users for this document are Yaskawa sales personnel, distributors, and partners.

This book may describe trademarked equipment, which is the property of other companies. These trademarks are the property of the registered owner companies and may include the following:

DeviceNet™, trademark of ODVA

Modbus®, trademark of Schneider Automation, Inc.

EtherCAT, trademark of Beckhoff Automation GmbH, Germany

MECHATROLINK - I, II, III, trademarks of MECHATROLINK Members Association

PROFIBUS®, trademark of PROFIBUS International.

PROFINET®, trademark of PROFIBUS International.

Ethernet/IP, trademark of ODVA

Other Documents and Manuals are available to support special use or installation of this product. These documents may be provided with the product or upon request. Contact Yaskawa America, Inc. or visit www.yaskawa.com.

Additional Resources

The Yaskawa.com web site has the most current information for all Yaskawa products. When researching product specifications or features the Yaskawa web site is the best resource to use. Some useful links for the GA500 drive product are listed here and throughout this document:

GA500 AC Microdrives

Drive Selection

The GA500 precisely controls induction, permanent magnet, and synchronous reluctance motors providing versatility to run a variety of applications with just one drive. The times of complex motor setup are over. With the new EZ Vector mode, the GA500 can run all of these motor types without comprehensive tuning.

- Time and Cost Savings
- Easy Installation and System Integration
- Easy to Use - Easy to Maintain
- More Reliable - Easier Machine Design

Standard (IP20/Protected Chassis) drives are intended for clean environments and can be mounted 3 different ways as follows:

- 1) In a separate enclosure with heatsink internal. Extra mounting brackets are not required.
- 2) In a separate enclosure with heatsink external. Refer to Enclosure Adapters and Kits for drives requiring extra mounting brackets.
- 3) Mounted without an enclosure. UL Type 1 Adapters must be used when mounting the drive without an enclosure.

The GA500 offers two separate performance ratings; Heavy Duty and Normal Duty. Heavy Duty is capable of creating more powerful torque, while Normal Duty allows the drive to operate a larger motor.

Drive Specifications

Power Ratings	
Item	Specification
Overload Capacity	110%/1 min. (Normal Duty) or 150%/1 min. (Heavy Duty)
Rated Voltage	200 to 240 VAC, -15 to +10%
	380 to 480 VAC, -15 to +10%
Capacity Range	240 V, Single-phase: 1/6 to 5 HP (0.1 to 3.7 kW)
	240 V, Three-Phase: 1/6 to 30 HP (0.1 to 22 kW)
	480 V, Three-Phase: 1/2 to 40 HP (0.2 to 30 kW)
Input Frequency	50/60 Hz +/-5%
Output Voltage Accuracy	+/-5%
Output Frequency	0 to 590 Hz (special software for up to 1000 Hz)
Control Method	V/f, Open Loop (IM/PM), Advanced Open Loop (PM), EZ Open Loop Vector
Motor Control	Induction Motor (IM), Permanent Magnet Motor (PM), Synchronous Reluctance Motor (SynRM)
Operating Environment	
Item	Specification
Ambient Temperature	-10 to +50°C (IP20/Protected Chassis), -10 to +40°C (UL Type 1), up to +60°C with derating
Storage Temperature	-40 to +70°C (short-term temperature during transportation)
Humidity	95% RH or less (non-condensing)
Altitude	Up to 1000 meters without derating, up to 4000 meters with output current and voltage derating
Shock	10 to 20 Hz: 9.8 m/s ²
	20 to 55 Hz: 5.9 m/s ²
Protection Design	IP20/Protected Chassis Standard, UL Type 1 kit optional
Mounting	Side-by-side, horizontal with derating, DIN rail, external heatsink
Conformal Coating (PCB's)	IEC 60721-3-3, Class 3C2 (chemical gases), Class 3S2 (solid particles)
Standards	CE, UL, cUL, KC, RCM, EAC, REACH, RoHS
Functional Safety	STO: IEC/EN61508 SIL3, PL _e

Network Communication Options

These cards, cables, and devices add control functionality to the standard drive. Items are shipped loose and unmounted.

Table 9: Option Cards

Option ¹	Purpose	Catalog Code
CANopen®	CAN based network option card supporting DS 301 and DSP 402 profiles as specified by CiA.	SI-S3
CC-Link	Fieldbus network option card managed by the CC-Link Partner Association (CLPA).	SI-C3
DeviceNet™	ODVA compliant option cards to connect to a DeviceNet network.	SI-N3
EtherCAT®	Option cards to turn the drive into an EtherCAT slave on the network.	SI-ES3
Ethernet/IP™	ODVA compliant option cards to connect to Ethernet/IP. (single port card)	SI-EN3
Ethernet/IP dual port	ODVA compliant option cards to connect to Ethernet/IP. (dual port card)	SI-EN3/D
MECHATROLINK-II	Option cards to turn the drive into a M-II node and connect to a high-speed MECHATROLINK-II network.	SI-T3
MECHATROLINK-III	Option cards to turn the drive into a M-III node and connect to a high-speed MECHATROLINK-III network.	SI-ET3
Modbus/TCP	Simple and effective solution to connect the drive to a Modbus TCP/IP network. (single port card)	SI-EM3
Modbus/TCP dual port	Simple and effective solution to connect the drive to a Modbus TCP/IP network. (dual port card)	SI-EM3/D
PROFIBUS-DP®	PI compliant option cards to connect to a PROFINET network.	SI-P3
PROFINET®	PI compliant option cards to connect to a PROFIBUS-DP network.	SI-EP3

1. Use of an option card requires the Option Card Carrier.

Table 10: Option Card Carrier

Option	Purpose	Catalog Code
Option Card Carrier	For use when installing a communication option card on the GA500.	JOHB-GA50

The diagram illustrates the assembly process for the Option Card Carrier. It shows a 'Network Option Card' being inserted into an 'Option Card Carrier and Mounting Hardware' unit. This unit is then shown being attached to the 'Drive Cover' using screws. The components are labeled: 'Network Option Card', 'Option Card Carrier and Mounting Hardware', and 'Drive Cover'.

UWR0052	Keypad Remote Mount Cable - 3 Meter
UWR01258	USB Cable for PC to Drive Communication - 3 Meter

Table 14: Android Mobile Device Interface Cables (for connecting Android device to USB port on drive)

Catalog Code	Description
UWR01516-B	USB Mini-B to USB Micro-B. On-The-Go (OTG) compatible, 2-meter length
UWR01516-C	USB Mini-B to USB Type-C. On-The-Go (OTG) compatible, 2-meter length

UWR01516-B - USB Mini-B to USB Micro-B

UWR01516-C - USB Mini-B to USB Type-C

Enclosure Adapters and Kits

These adapters are for mounting the standard IP20 drives directly to a wall, DIN Rail, a machine in a clean environment (UL Type 1), or inside a UL Type 1 enclosure with external heatsink. The UL Type 1 Adapters convert an Open Chassis Drive (IP20) without EMC to an enclosed wall-mounted drive (UL Type 1).

Additional Information
Enclosure Adapters and Kits

IP20/UL Type 1 Adapters

This adapter turns the GA500 IP20 into a GA500 UL Type 1 drive.

DIN Rail Mounting Adapters

By utilizing the DIN rail attachment, equipped drives can be attached and detached with one touch. DIN adapters can be mounted on models with dimensions less than 170 mm wide and less than 128 mm in height.

Power Options

Power options are add on devices that can be used to help increase power factor, improve harmonics, and dissipate regenerative energy.

Name	Purpose
DC Bus Reactor	- Improves the drive input power factor. - Prevents damage to the drive when the power supply capacity is large. Only use this option when the power supply capacity is more than 600 kVA. - Decreases harmonic current - Improves the power supply total power factor.
AC Reactor	- Improves the drive input power factor. - Prevents damage to the drive when the power supply capacity is large. Only use this option when the power supply capacity is more than 600 kVA. - Decreases harmonic current - Improves the power supply total power factor.
3% Braking Resistor	Decreases the regenerative energy of the motor and decrease the deceleration time (Duty cycle of 3% ED). An installation attachment is required.
10% Braking Resistor Unit	Decreases the regenerative energy of the motor and decrease the deceleration time (Duty cycle of 10% ED). The unit contains a thermal overload relay.
Braking Unit	Use with a braking resistor unit to decrease motor deceleration times.
R1000	The R1000 regenerative module is used to divert energy generated by the motor back onto the line for use by other loads. The energy is directed back onto the line by taking DC voltage from the drive running the motor and converting it into a three-phase AC voltage waveform.
Single-Phase Converter	The Single Phase Converter is used in single-phase to three-phase conversion applications to eliminate drive derating. The Single Phase Converter significantly reduces stresses on the power grid with near unity power factor and less than 10% iTHD.

Additional Information

[GA500 Power Options](#)

DC Bus Reactors

Use a DC Bus Reactor on the DC bus terminals of a drive to reduce the effect of line-side transients and input current total harmonic distortion (THD). Large HP drives include a 3% bus impedance as standard. The DC bus reactor is available loose or in a separate UL Type 1 enclosure.

AC Input Reactors

3% and 5% impedance reactors may be used on either the input or output to reduce the effects of line or load side transients on the drive. The reactors listed are available loose or in a separate UL Type 1 enclosure.

Dynamic Braking Options

Additional Information	
Braking Resistor Specifications	Braking Resistor Drawings
Braking Connection Diagrams	

10% Dynamic Braking Options

Dynamic Braking Resistor, 10% Duty Cycle - are rated for 10% duty cycle over a 100 second interval. The resistors will achieve a minimum 150% peak braking torque for heavy duty horsepower ratings and a minimum of 100% peak braking power for normal duty horsepower ratings. These resistors are designed for separate panel mounting.

R1000 Regenerative Systems

- Compatible with all conventional drives having full power access to DC bus
- Rated for 100% power, 25% duty cycle (60 seconds maximum on time), or 80% continuous
- 0.9 Power Factor at full load
- Overload capability of 150% for 30 seconds
- Overcurrent and Overheat Protection

Additional Information		
R1000 Online Resources	Flyer	Manual

Each R1000 regenerative unit requires the following:

- **R1000:** The R1000 regenerative module is used to divert energy generated by the motor back onto the line for use by other loads. The energy is directed back onto the line by taking DC voltage from the drive running the motor and converting it into a three phase AC voltage waveform.
- **Power Coordination Reactor:** The power coordination reactor provides impedance to limit peak current. The power coordination reactor represents minimum impedance required to limit current to levels acceptable to the R1000.
- **Fuses and Fuse Holder:** Recommended fusing and their corresponding holder(s) is provided for device protection and UL certification.
- **Current Suppression Reactor:** The current suppression reactor provides impedance to protect the connected drive's input section from peak current that may result from the R1000 IGBT switching section. The current suppression reactor provides isolation from the dv/dt of the R1000 switching section.

Typical Applications

Stopping
Elevators and Lifts
Centrifuges
Saws
Large Fans
Machine Tool Spindles

Cyclic Loading
Presses
Dryers
Vibratory Equipment

Continuous Regeneration
Winders
Downhill Conveyors
Dynamometers

Note: The R1000 is not suitable to use with single-phase products.

Single Phase Converter

Yaskawa's industry leading Single Phase Converter (SPC) cleanly converts single-phase AC power to DC power for Yaskawa variable frequency drives. The SPC combines Yaskawa reliability and drive technology with motor control solutions for businesses in remote areas. The SPC eliminates the need to oversize variable frequency drives for single-phase applications while reducing distortion to less than 10% iTHD. With lower input harmonics and near unity power factor, the SPC also eliminates the need to significantly oversize transformers in single-phase applications, reducing overall installation costs. The Single Phase Converter addresses these common issues with AC motors powered from single-phase input:

- Limited single-phase motor options.
- Increased maintenance of rotating parts and tuned circuits.
- Inefficient use of power due to choppy current harmonics.

Item	Specification
Power Range	230 VAC: 20-60 HP
	460 VAC: 30-125 HP
Input Voltage Tolerance	230-240 V, Single-Phase
	460-480 V, Single-Phase
	Tolerance -5/+10 % ¹
Power Factor	0.99
Ambient Operating Temperature	-10 to 50 °C (14 to 122 °F) Open Chassis
Global Certifications	UL, RoHS
User Interface	4 LED indicators: Power, Ready, Run, Fault

1. -10 % Minimum input voltage for 60 seconds at rated power.

2. Refer to the GA500 Technical Manual for AOLV/PM Carrier Frequency Derating information.

Altitude

Install the drive in a location that with an altitude of 1000 m (3281 ft) or lower. Derate the output current by 1% for each 100 m (328 ft) to install the drive in altitudes between 1000 m to 3000 m (3281 ft to 9843 ft). It is not necessary to derate the rated voltage in these conditions:

- Installing the drive at 2000 m (6562 ft) or lower.
- Installing the drive between 2000 m to 4000 m (6562 ft to 13132 ft) and grounding the neutral point on the power supply.

Contact Yaskawa or your nearest sales representative when the drive is not grounded with the neutral network.

Ambient Temperature

IP20/Protected Chassis: -10 °C to + 50 °C (14 °F to 122 °F)

IP20/UL Type 1: -10 °C to + 40 °C (14 °F to 104 °F)

- Drive reliability is better in environments that do not have wide temperature fluctuations.
- When installing the drive in an enclosure, use a cooling fan or air conditioner to keep the internal air temperature in the permitted range.
- Do not let the drive freeze.
- To install the drive in areas with ambient temperatures between 40 °C to 60 °C (104 °F to 140 °F), see Figure 11 for output current derating.

Figure 11: Ambient Temperature Derating Chart

A - L8-35 = 0 [IP20, Finless]

B - L8-35 = 1 [Side-by-Side Installation]

C - L8-35 = 2 [UL Type 1, Wall Mount]

D - L8-35 = 3 [External Heatsink]

1. Class T fuses are fast acting (non-time delay) only.

2. Protected enclosure required for RK fuses (same as MCCB).

3. The specified MCCB is current limiting. An equivalent listed current limiting type MCCB is able to be used where the peak let-through current and I_{2t} of the equivalent MCCB is not greater than the specified MCCB.

4. Maximum Fuse or MCCB ratings are based on ND ratings and 175 and 200% respectively.

5. Ventilated enclosure type.
