

Here's Parker's Economical New Brass Ball Valve

Ball Valve Series 525 is a new economical series of valves where the standard full flow valve is not required

Parker's industrial brass ball valves are designed to provide years of service at an economical price. Virgin PTFE seals ensure a minimum of 10% contact between the ball and seal, reducing the possibility of leaks.

Batch coding printed on every valve produced for complete traceability. These ball valves are intended for use in the fully open or closed positions.

The 525 is ideal for several markets including construction, industrial, mobile, agriculture and heavy duty trucks. Common applications are fuel line shutoffs for gasoline and diesel equipment, air service lines, water service lines on capital equipment, and plant design plumbing requiring total shutoff capability.

Contact one of our hose and fittings experts today to discuss how Cross can help you improve your efficiency with this new series of valves.

Technical Guide: The Hose Selection Process - S.T.A.M.P.E.D.

Have you ever heard of the term "S.T.A.M.P.E.D." in the hose industry? It's an acronym standard that should begin every conversation when replacing an existing hose, or selecting a hose for a new application. The easy to remember acronym stands for **Size, Temperature, Application, Material/Media, Pressure, Ends, Delivery.**

The [S.T.A.M.P.E.D. system of hose requirements](#) is an absolutely critical list when it comes to recommending the correct hose for the correct application. For more information about selecting the right hose, contact a Cross hose and fittings specialist. Our team has years of experience working with a full range of hose and assembly types and can help your team determine the best products for your operation, no matter what the application.
