

## Mobile Systems Integration

See how Cross Company is helping our customers respond to the COVID-19 pandemic

## Bridge the Gap Between Design and Build with Prototyping Services

Mobile systems prototype development is important, especially for OEMs to ensure all machine requirements are met prior to the production stage. Without a prototype, production machines can get out into the marketplace and potentially need field correction. This can get costly, not only for the OEM, but also for the end-user. Business is difficult enough without having to deal with errors that could have been caught in a prototyping testing phase.

We offer in-house prototyping services for complete mobile systems integration projects. When you deliver your machine to our [Mobile Technology Center](#) in Greensboro, NC, we will outfit it with a custom hydraulic and controls system that makes your machine perform and operate to your customer's satisfaction.

Some components such as hose kits, custom control panels, and custom reservoirs allow for off-site prototyping. Our team can work with you remotely, and with 3D CAD models, we can virtually develop a prototype for your equipment, without the need to travel or send in your entire project. This enables your team to continue work on other aspects of the build, without needing to halt progress while certain components are developed.

## Do you know what to look for in a fever screening system?

As we all get back to the "new normal" many are faced with the dilemma of how to ensure the safety of their employees and patrons. Whether you operate a large manufacturing facility, a hospital, a municipal building, an airport, or even a shopping center, you may be looking for ways to stop infected individuals from entering your building. One way to add a layer of security is to check the temperature of everyone as they enter the facility. There are, however, a number of options on the market and you may not be sure which is best for you. To help, we have put together some of the key considerations to look at when shopping for a fever screening system.
