The Preventative Maintenance Mindset: How to Quantify the True Cost of Inaction

This article was featured in [Valve World Americas](#) in October 2020 and it was written by [John Laurens](#) / [Cross Company Process Solutions Group](#)

Many of us have heard of lean initiatives such as predictive maintenance. Possibly in the past, you focused upon preventative maintenance, or even use to failure. Each of these have their good points and bad points. Today we're going to discuss the value of a predictive maintenance mindset and how to quantify the cost of inaction.

There is little upfront cost for a mindset.

The beauty of this mindset is its generally free, and once adopted you can invest as much capital as you desire to achieve the results you require. Beginning with the mindset doesn't require a grandiose amount of capital, it doesn't necessitate a line stoppage, or even retraining your teams. It is simply adopting a new mindset, and attitude toward the maintenance of items, processes, machines, and even people.

Read the rest of the story then contact a Cross Process Solutions expert to discuss your preventative maintenance plans.

Improve Efficiency and Reduce Risk in Data Centers with Cross Process Solutions Group

Much of the world that we take for granted today is reliant on the continual performance of data centers located all over the country. Everything from financial institutions to telecommunication companies to social media platforms require reliable data centers to manage day to day operations. You may be wondering what data centers could possibly have to do with the Cross Process Solutions group, as they would not be considered part of the process industry. It turns out that there are actually a number of similarities — particularly when you think about mission-critical services such as cooling systems and electrical power.

Automation, Monitoring and Control

At Cross Process Solutions Group, or PSG, we specialize in the automation of facilities that need to run without fail. Whether it is to meet safety requirements, FDA regulations, GMP, or simply to avoid revenue loss due to downtime, our team are experts at designing and building systems with double and triple redundancies to ensure continuous operation.
