

Laboratory Carding Machine

KFY-1015

Small Small scale complete carding machine for Laboratory use, working/web width 500mm. Used to accurately simulate the working condition of all types of common fibres (wool, cotton and synthetics) under conditions preset by the operator. By means of easy adjustments it is possible to analyze both short and long fibres.

Main Technical Features

For safety reasons the machine is covered with a steel frame, whilst its main functional parts are protected by Perspex plates permitting kind of visual assessment or inspection. The output of the Card is a fibre web. Particularly suitable to prepare homogeneous colored fibre samples under variable conditions. Downstream, such samples can be used for any type of analysis or verification. For producers of synthetic man-made fibres (acrylic, polyester, polyamide, polypropylene, etc) the use of the laboratory carding machine is essential to test both the quality and the homogeneity of fibres. It can be also used for the quality testing of the enzymes used during fiber processing. The mean production is of about 4 kg per hour with a supply ranging from a minimum of 20 to a maximum of about 150 g/m. Instrument conceived for traditional textile laboratories, institutes, textile schools, as well as for the research and development of new fibres or blends.

Size in cm: 86 x 146 x 173 H

Origin: Italy

Power Supply: 220V 50/60Hz three phases

Packing Estimated Specifications

Size in cm: 202 x 94 x 162 H

Volume: 3076 m³

Gross Weight: 620,0 kg
