DATA SHEET

Pressure Mass Flow Controllers

Model SLAMf10/20

Model SLA5810/20/40

SLA5810/20/40 SLAMf10/20 Series

Elastomer Sealed, Digital, Upstream, Downstream, and Remote Transducer Pressure Controllers

The SLA Series pressure controllers and pressure controlling flowmeters have gained broad acceptance as the standard for accuracy, stability and reliability. These products have a wide pressure measurement and control range and are suitable for a broad range of operating conditions making them well suited for applications in thin film processes, chemical and petrochemical research, laboratory, analytical, fuel cell and life science among others.

Highlights of the SLA Series pressure controller product include: industry leading long term stability, accuracy backed by superior metrology systems and methods using primary flow calibration systems directly traceable to international standards, and a broad range of analog and digital I/O options to suit virtually any application. An independent diagnostic/service port permits users to troubleshoot or change process conditions without removing the pressure controller from service. This product is also available with a NEMA 4X/IP66 approved enclosure, making it perfect for hosedown/washdown applications.

Based on the core control technology present in our industry-leading thermal mass flow controllers, Brooks' SLA Pressure Controllers are able to control the pressure of a gas based on a set point signal by replacing the thermal mass flow sensor with a pressure sensor. It utilizes closed-loop control, which eliminates the droop and hysteresis associated with traditional mechanical spring diaphragm pressure regulators. With the wide range of options and features available, the SLA Pressure Controller Series provides users with a single platform to support a broad range of applications.

Features	Benefits
Closed loop control	Eliminates droop & hysteresis associated with traditional mechanical spring diaphragm pressure regulators
User accessible service port	Simplified installation, start-up, troubleshooting and access to diagnostics provides maximum uptime
Wide pressure range capabilities	Ability to control up to 4500 psig, giving it one of the widest pressure ranges on the market today
Advanced diagnostics	Ensures device is operating within user specified limits for high process yield and maximum uptime
Superior valve technology	Minimum leak-by, maximum turndown, fast response reduces overall gas panel cost and increases throughput
Adaptable mechanical configurations	Easily retrofit to existing systems
Primary standard calibration systems	Ensures measurement accuracy is traceable to international standards
Simple modular design and reducing total cost of ownership	Easy-to-service elastomer sealed design provides options for factory or field service maximizing uptime
IP66/NEMA 4X rated enclosure	Weatherproof protection optional for "Hosedown" applications such as: Food, Beverage, Pharmaceutical & Biotech
Hazardous area approvals	Designed to operate in non-incendive (Division 2/Zone 2) environments

BROOKS® INSTRUMENT

Beyond Measure

Flexible Pressure Control Capabilities

Brooks' Pressure Controllers can be built for both upstream pressure control and downstream pressure control. These designations are determined by the location of the vessel where the pressure is being controlled. Our upstream pressure controllers can also be considered back pressure regulators, and our downstream pressure controllers can also be considered pressure regulators. In addition, a remote transducer configuration can be used to combine the benefits of pressure control and flow measurement.

Advanced Diagnostics

Pressure Controllers can be some of the most complex components in a gas delivery system, but they are typically critical to the tool's success. When dealing with highly toxic or corrosive gases, removing the pressure controller to determine if it is faulty should be the last resort. In response to this, Brooks pioneered smarter products with embedded self test routines and introduced an independent diagnostic/service port and software to provide the user with a simple interface, for troubleshooting without disturbing pressure controller operation.

Wide Pressure Range

The SLA Pressure Controller Series covers an extremely broad range of pressures. Brooks Pressure Controllers can control pressures ranging from sub-atmosphere all the way to 4500 psi (310 bar), giving it the widest pressure range on the market today! Even with major changes to the flowrate, Brooks Pressure Controllers are able to maintain stable pressure which keeps processes running smoothly and efficiently.

Broad Array of Communication Options

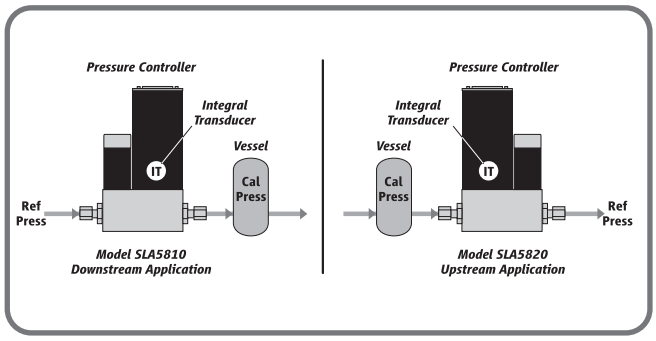
Brooks offers traditional analog options as well as RS-485 digital communications ("S-protocol", based on HART) Brooks also offers control interfaces via digital network protocols like DeviceNet (DeviceNet not available on SLAMf 10/20), a high speed (up to 500k baud) digital communication network, and Profibus. Brooks' communication capabilities and device-profiles have been certified by the ODVA (Open DeviceNet Vendor's Association) and the ITK (Interoperability Test Kit). Other network protocols are in development. Talk to your Brooks representative about your specific needs.

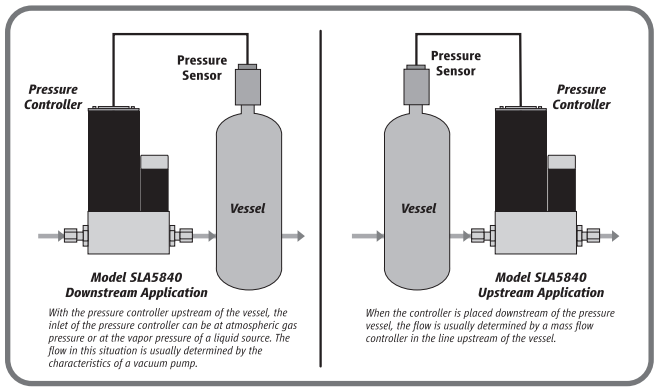
Wash-down Enclosure

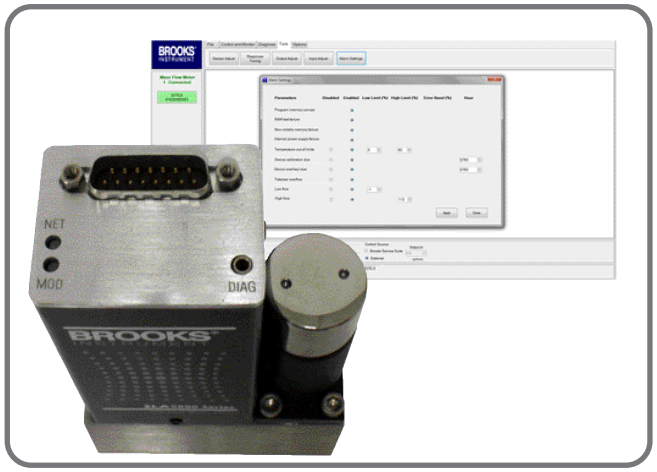
The SLAMf Series comes equipped with an IP66 / NEMA4X rated enclosure. This makes these instruments perfect for wash-down or outdoor environments. So no matter how harsh the surroundings, the SLAMf Series keeps the process under control.

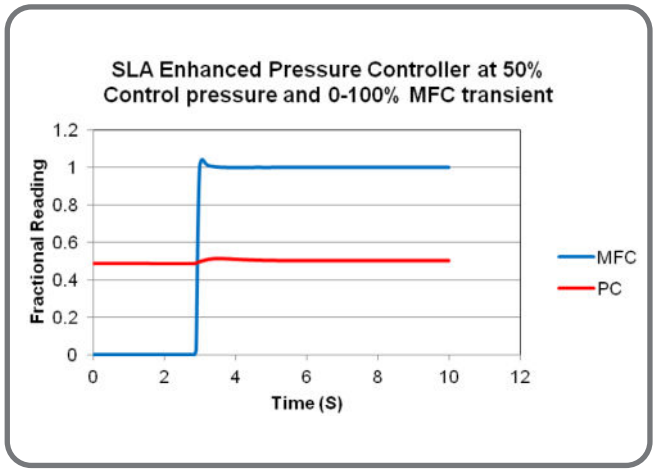
Hazardous Area Approvals

Brooks SLA Pressure Controller products come with various levels of Hazardous Area Approvals. The SLA5800 Series Pressure Controllers are approved for Class I, Division 2/Zone 2 areas, while the SLAMF Series Pressure Controllers have enclosures that can be used in Class II & Class III, Division 2/Zone 2.









Flow Ranges and Pressure Ratings:

Pressure Controller Model	Pressure Controller Model	Flow Ranges N2 Eq. Ratings		Minimum Full Scale Pressure	Maximum Full Scale Pressure	Pressure Equipment Directive (PED) Module H Category
		Min. F.S.	Max. F.S.	Standard	Standard	
SLA5810/SLAMf10	Downstream (Pressure Regulator)	0.003 0.1	50* 10	1 psi 1500 psi	1500 psia/103 bara 4500 psia/310 bara	Sound Engineering Practices (SEP)
SLA5820/SLAMf20	Upstream (Back Pressure Regulator)	0.003 0.1	50* 10	1 psi 1500 psi	1500 psia/103 bara 4500 psia/310 bara	Sound Engineering Practices (SEP)

Full Range	0-22 mA		N/A
Max. Load	380 Ohms		N/A
ANALOG I/O ALARM OUTPUT*			
Type	Open Collector		N/A
Max. Closed (On) Current	25 mA		N/A
Max. Open (Off) Leakage	1µA		N/A
Max. Open (Off) Voltage	30 Vdc		N/A
ANALOG I/O VALVE OVERRIDE SIGNAL SPECIFICATIONS**			
Floating/Unconnected	Instrument controls valve to command set point		N/A
VOR < 0.3 Vdc	Valve Closed		N/A
0.3 Vdc < VOR < 4.8 Vdc	Undefined		N/A
VOR > 4.8 Vdc	Valve Open		N/A
Input Impedence	60 kOhms		N/A
Absolute Max. Input	(-25 Vdc) < VOR < 25 Vdc (without damage)		N/A

*The Alarm Output is an open collector or "contact type" that is CLOSED (on) whenever an alarm is active.
The Alarm Output may be set to indicate any one of various alarm conditions.

** The Valve Override Signal (VOR) is implemented as an analog input which measures the voltage at the input and controls the valve based upon the measured reading as shown in this section.

*** Available on SLA5810/20/40 only.

Service and Support

Brooks is committed to assuring all of our customers receive the ideal flow solution for their application, along with outstanding service and support to back it up. We operate first class repair facilities located around the world to provide rapid response and support. Each location utilizes primary standard calibration equipment to ensure accuracy and reliability for repairs and recalibration and is certified by our local Weights and Measures Authorities and traceable to the relevant International Standards.

Visit www.BrooksInstrument.com to locate the service location nearest to you.

START-UP SERVICE AND IN-SITU CALIBRATION

Brooks Instrument can provide start-up service prior to operation when required. For some process applications, where ISO-9001 Quality Certification is important, it is mandatory to verify and/or (re)calibrate the products periodically. In many cases this service can be provided under in-situ conditions, and the results will be traceable to the relevant international quality standards.

CUSTOMER SEMINARS AND TRAINING

Brooks Instrument can provide customer seminars and dedicated training to engineers, end users, and maintenance persons. *Please contact your nearest sales representative for more details.* Due to Brooks Instrument's commitment to continuous improvement of our products, all specifications are subject to change without notice.
