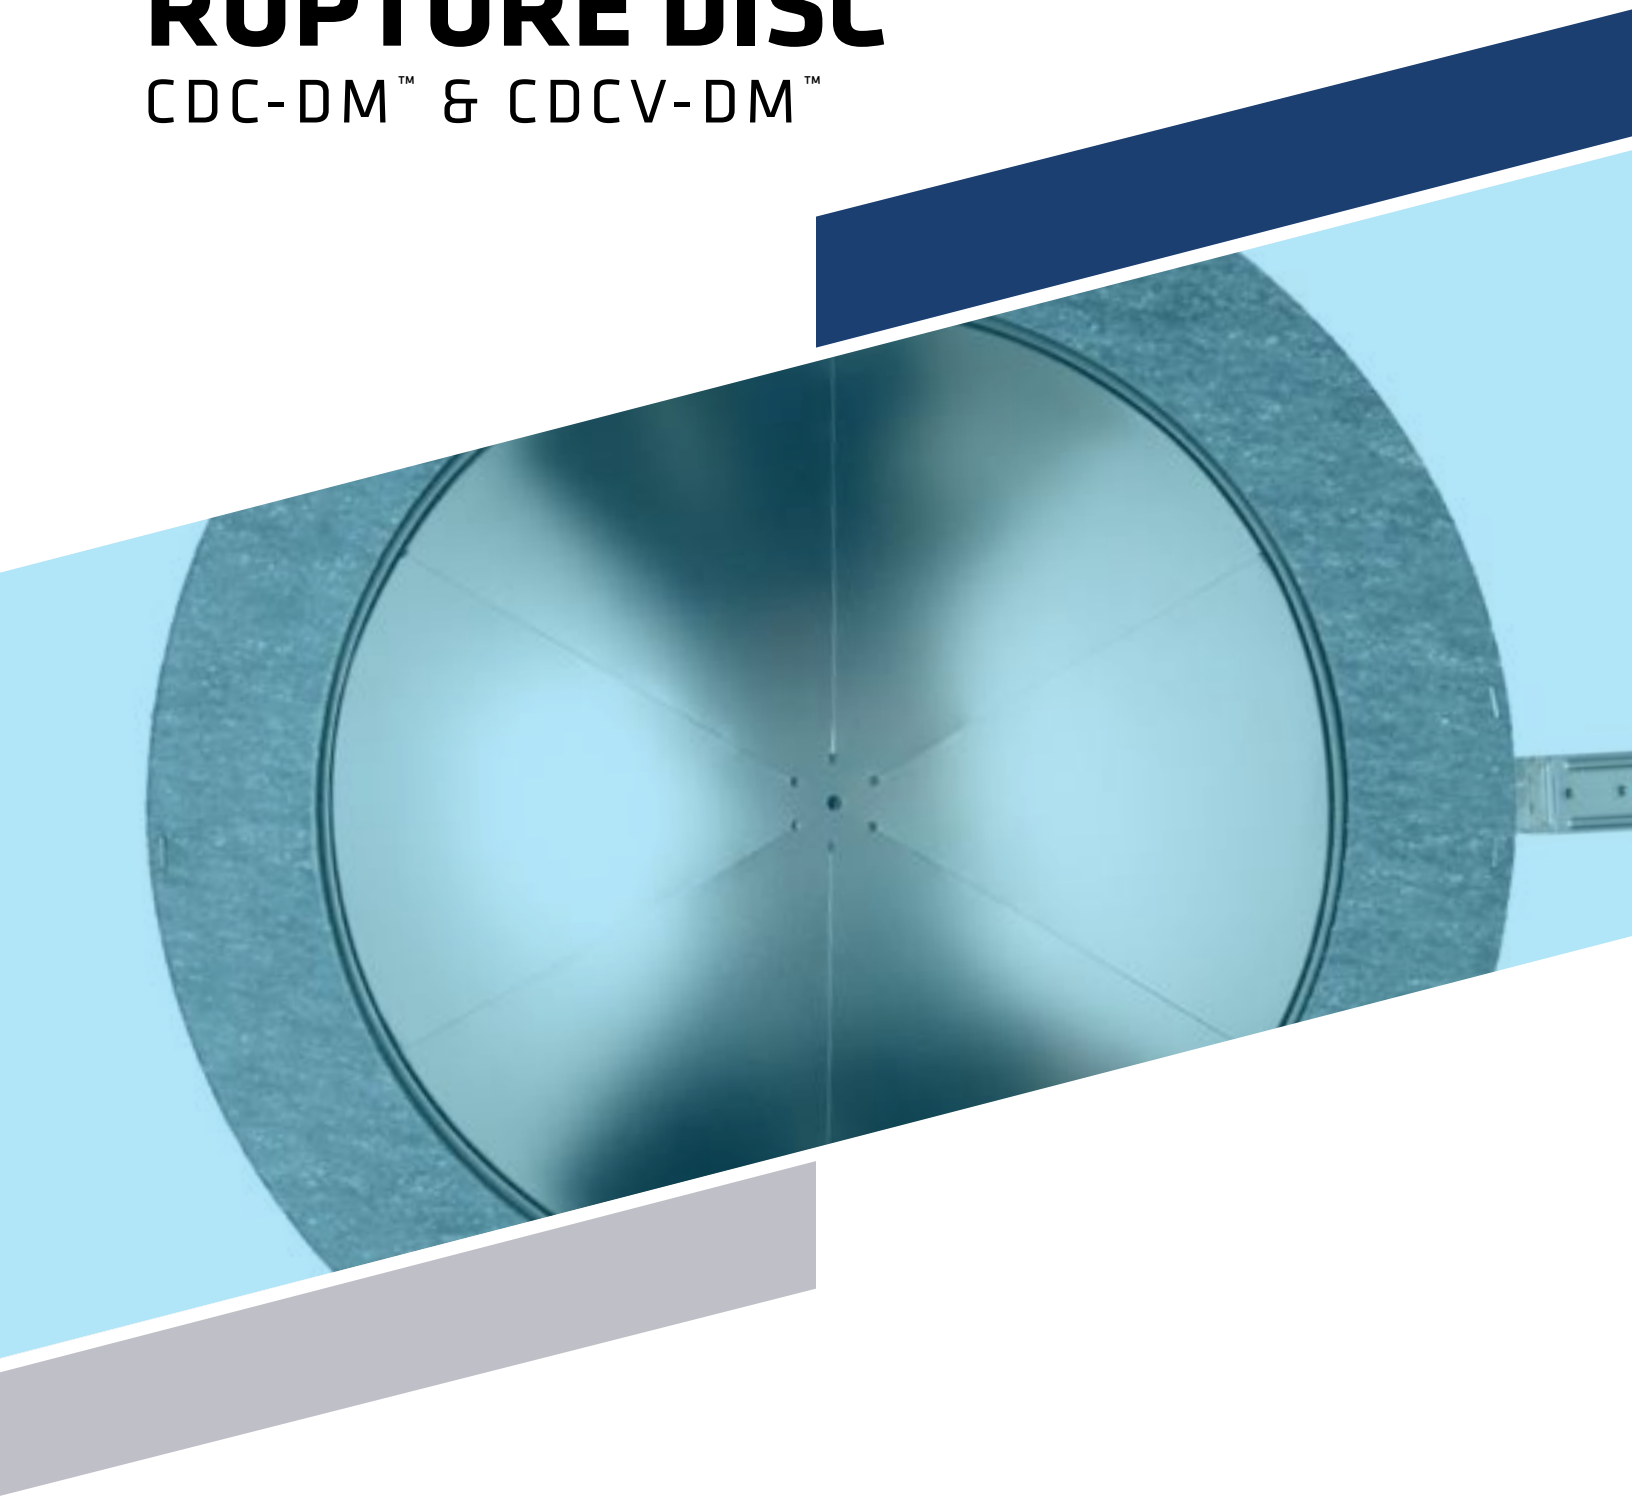
Continental Disc® Corporation

DIRECT MOUNT COMPOSITE RUPTURE DISC

CDC-DM™ & CDCV-DM™



CDC-DM™ & CDCV-DM™

Designed to provide instantaneous, full-opening pressure relief, the Continental Disc CDC-DM and CDCV-DM "direct-mount" holder-less composite rupture discs are differential pressure relief devices used to protect pressurized systems, equipment, and vessels from potentially damaging overpressure conditions. The CDC-DM composite rupture disc is designed to operate in conditions that are not subjected to vacuum conditions, while the CDCV-DM composite rupture disc is designed to operate in vacuum conditions.

Technical Details

- Size Range: 14" – 36" (350 mm – 900 mm)
- Flange Classes: Available in ASME #150 Series A, DIN PN6, and JIS 10K weld neck flange with standard schedule pipe bore
- Materials of Construction:
  - Outlet Gasket: Non-asbestos, Polytetrafluoroethylene (PTFE)*, or GYLON® 3500
  - Outlet Ring: 316 SS, 316L SS, Alloy C276, Alloy 600, Alloy 400 or Nickel
  - Top Section: 316 SS, 316L SS, Alloy C276, Alloy 600, Alloy 400 or Nickel
  - Seal: Aluminum, 316 SS, 316L SS, Alloy C276, Alloy 600, Alloy 400, Nickel or Fluoropolymer
  - Vacuum/Handling Support: 316 SS, 316L SS, Alloy C276, Alloy 600, Alloy 400 or Nickel
  - Inlet Gasket: Non-asbestos or Fluoropolymer
  - Operating Pressure: Up to 80% of the rated (stamped) burst pressure in liquid or gas applications
- Maximum Temperature: 400°F (204°C)
- Burst Range: 2 psig – 59 psig (0,13 barg – 4,06 barg)
- CDCV-DM can withstand full vacuum conditions
- K_R Factors: 0.93 gas/vapor relief, 1.06 liquid relief
- Global certifications and approvals including ASME (UD) and PED (CE)

Features

- The metallic top section can be manufactured from various materials, depending on your application and corrosion-resistance requirements. Seals, protective rings, gaskets and outline liners can also be manufactured from a variety of materials to meet your needs.
- Our preformed composite rupture discs also feature a seven-hole pattern, positioned at the apex of the rupture disc's top section. This unique configuration, in combination with the pre-cut sections along the dome, provide non-fragmenting characteristics when used with a fluoropolymer seal.
- By using this seven-hole design, thicker, more durable materials can be used to manufacture the rupture disc, while still achieving the high 80% operating-to-burst-pressure ratio.
- Various seal material options, such as fluoropolymers and exotic metals, help ensure excellent corrosion resistance. Our non-metallic seals are essential to eliminate fragmentation.
- An outlet ring is provided on the CDCV-DM and the CDC-DM Composite Rupture Discs for rigidity and to help align the rupture disc within the customer's flange.
- Ideal for liquid or gas/vapor applications.
- Handling support provided when vacuum support is not specified.

Options

- Available with Continental's exclusive integral B.D.I.® Burst Disc Indication
- Fluoropolymer coating available

*PTFE outlet gasket not available with integral B.D.I.

SPECIFICATIONS

Product	Specified Burst Pressure psig (barg)	Corresponding Manufacturing Range -/+ %	Rated (Marked) Burst Tolerance
CDC-DM, CDCV-DM	≥2 – ≤8 (>0,138 – ≤0,552)	±40	± 20%
	>8 – ≤12 (>0,552 – ≤0,815)	±30	± 15%
	>12 – ≤14 (>0,815 – ≤0,965)	-10 / +20	± 10%
	>14 – ≤19 (>0,965 – ≤1,31)	-10 / +20	± 2 psig (± 0,138 barg)
	>19 – ≤40 (>1,31 – ≤2,76)	-4 / +14	± 2 psig (± 0,138 barg)
	>40 – ≤50 (>2,76 – ≤3,45)	-4 / +14	±5%
	>50 – ≤100 (>3,45 – ≤6,90)	-4 / +10	

Rating and Range is based on psig values, barg values are provided for reference

B.D.I.® ALARM SYSTEM

The Continental Disc B.D.I. (Burst Disc Indicator) Alarm System reduces downtime, increase efficiency and ensure the safety of your facility. When an overpressure or vacuum condition causes a disc to rupture, the B.D.I. immediately sends a signal to the control room to alert the system operator.

The heart of the Burst Disc Indicator Alarm System is the BDI Alarm Strip. When a disc ruptures, it severs the electrically charged strip, opening the circuit and signaling the control room.

The B.D.I.® Alarm Monitor has been developed as an optional alarm monitor system to notify operators or activate appropriate equipment of an overpressure or vacuum event for a specific B.D.I.® Alarm Strip. Control panels, annunciators, light panels or other signaling devices can be used to warn of a ruptured disc. The B.D.I.® Alarm System is versatile to adapt to a variety of warning devices. Pumps, valves and other systems may also be activated to respond to an overpressure of vacuum situation by the break of a specific B.D.I.® Alarm Strip.

Linking the B.D.I. Alarm Strip to the monitoring system is the B.D.I. Lead Wire Assembly. A two-pin bullet plug protects the terminals at the connecting point against moisture. It is abrasion resistant, flexible, and highly weather-resistant.

Together this system will provide immediate notification of a burst disc to reduce downtime, increase efficiency and ensure the safety of your facility.

Technical Details

- Maximum current: 50 milliamp
- Maximum voltage: 24 VDC RMS
- Operational Temperature Range: -40 – +400 °F (-40 – +204 °C)
- B.D.I.® Alarm strip is composed of copper conductors adhered to a thin strip of KAPTON® film
- B.D.I.® Alarm Strip has been certified for use in “potentially explosive atmospheres” according to the requirements of the European Union
- Standard gaskets are asbestos free fiber-bound material

Features

- Resistant to chemical attack and corrosion
- Usable over a wide range of temperatures
- Compatible with standard CDC-DM and CDCV-DM rupture discs

Options

- Tantalum conductors available
- B.D.I.® Alarm Monitor
- Connector: Standard Plug or Bare Leads
