

Parker Air Products Your Operation Needs

When it comes to air products, Parker offers a variety of products designed for seamless connectivity, reliable air transfer, and optimal performance. From air couplers to blow guns to Transair, Parker's pneumatic offering has helped many operations streamline their production processes, increase safety, and optimize throughput.

If you're regularly working with pneumatic applications that require reliable air flow, you need a reliable connection. Broken air lines can result in loss of productivity, contamination of product, or even injury to operators. And any of these factors can also mean work stoppage and unplanned downtime. That's why it's so important to utilize air products you can trust. It's also why Cross partners with Parker for many pneumatic solutions. Check out some of the Parker air product offering.

Push-to-Connect Fittings

Parker's push-to-connect fittings are simple to use and efficient for connecting tubing to pneumatic fittings. With a comprehensive range of configurations and materials, these fittings provide an intuitive solution for a range of applications across diverse industrial markets. This ease of installation makes them a go-to choice for transfer needs, setting a new standard for intuitive pneumatic connections.

Pneumatic Quick Couplings

With the widest range on the market, Parker's pneumatic quick couplings encompass all standard industry profiles and interchange profiles relevant to various markets. Available in a full range of materials, these couplings offer versatility for pneumatic applications and other transfer needs. The accompanying range of threaded and hose adapters enhances configurability, ensuring a seamless fit with quick couplings for optimal performance in diverse applications.

Pneumatic Hose

Parker's pneumatic hoses are the lifeline of many pneumatic systems, offering versatility beyond traditional applications. Designed to handle diverse media, these hoses come in configurations catering to chemical resistance, high pressure, and low-temperature requirements. The user-friendly installation process further enhances their suitability for a broad spectrum of applications, serving crucial roles in today's most significant markets.

Parker Air Products Your Operation Needs

Transair

Transair is a fast, flexible, and easily-modifiable pipe system for compressed air and other industrial transfer applications. Distinguishing itself from conventional materials prone to corrosion, Transair® components are reusable and interchangeable, facilitating immediate and effortless layout modifications. This innovative pipe system not only ensures clean air quality but also delivers optimum flow rate performance, providing another example of Parker's commitment to efficiency and reliability.
